Connex® Electronic Vitals Documentation
For Long-Term and Post-Acute Care

Connex[®] Electronic Vitals Documentation **automates your processes to help reduce errors and improve efficiency—all while enhancing clinical decision-making.**

As the elderly population grows and residents' acuity levels increase, the demand for care in long-term and post-acute care (LTPAC) facilities continues to escalate as well. With cost constraints and higher resident-to-caregiver ratios, it's more important than ever to have tools that help you save time and improve the accuracy of resident information.

Welch Allyn can help.

A Better Way to Collect and Document Resident Vitals

Connex monitors provide wireless transmission of resident vital signs from the point of care directly into the medical chart in your EMR—helping to dramatically reduce common transcription errors and give clinicians more time back to care for residents.

- Collect a complete set of vitals and document additional information—all in about a minute¹
- Connect with leading EMRs including PointClickCare[®] and MatrixCare[®]
- Collect vitals in routine spot checks or programmable timed intervals

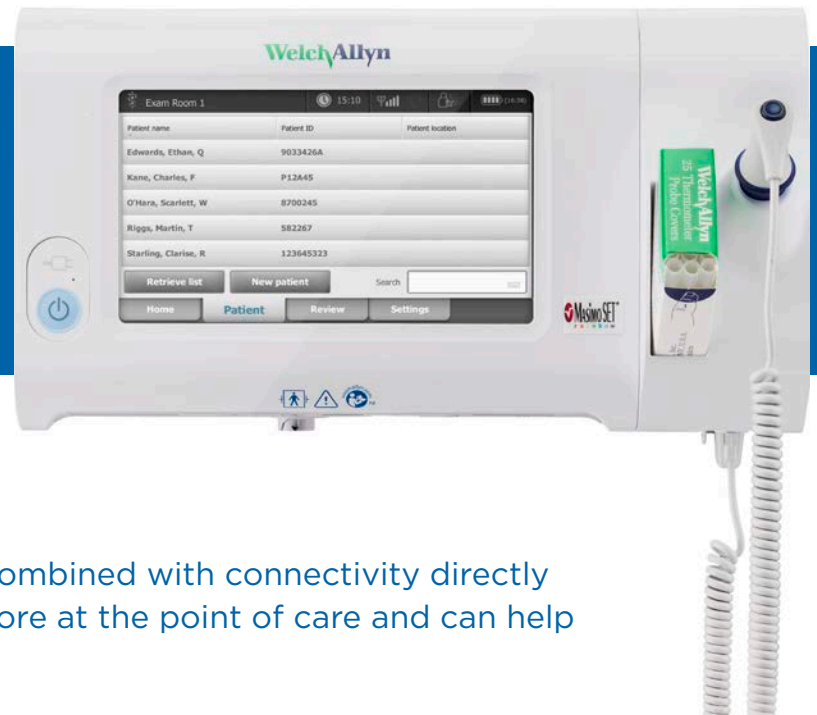

The Vital Information You Need

- Accurate and more comfortable blood pressure measurement in only 15 seconds with SureBP[®] technology
- Thermometry options designed to meet the needs of residents and clinicians: SureTemp[®] Plus or Braun ThermoScan[®] PRO 6000 Ear Thermometry
- Choice of leading SpO₂ technologies from Masimo[®], Nellcor[®] and Nonin[®]
- Direct transfer of weight data from Detecto[®], Health o meter[®] and SECA scales

¹ Estimate based on standard acquisition times for Welch Allyn sensors: Approximately 15 seconds for blood pressure, 4 to 7 seconds for temperature, and 8 to 12 seconds for SpO₂.

Redefine The Point of Care in your facility with accurate, automated vitals documentation.

The Connex family of vital signs devices, combined with connectivity directly to your EMR, empowers clinicians to do more at the point of care and can help LTPAC facilities improve:

- **Timeliness and efficiency:** Reduce duplication of efforts and delays in entering data. Vitals transmit directly to residents' electronic records so clinicians have information at their fingertips to help them provide better care.
- **Data accuracy:** Wireless connectivity between the Connex devices and the electronic medical record can help reduce the opportunity for manual transcription errors.
- **Quality of care:** Proactively improve care plans and make more informed care decisions with accurate, timely vitals.

“ When manually collecting vital signs, our clinicians had to first document the information on paper and then enter that information into the EMR. During this process, it was easy to omit data or enter it incorrectly. Automatically transmitting the vitals data directly from the monitor to PointClickCare helps us improve accuracy and serve our residents better as a result. ”

-April Diaz RN, BS, Director of Clinical Services for Marquis Companies
